LASER LEVEL

Cross-Reference to Related Applications

[0001] This application is a continuation-in-part of US Application Serial No. (314,130)

10/277,474, filed October 22, 2002, now pending, which in turn derives priority under 35

USC § 119(e) from US Application Serial No. 60/384,673, filed on May 31, 2002.

Field of the Invention

[0002] This invention relates generally to laser instruments and specifically to laser levels with additional non-leveling capabilities.

Background of the Invention

[0003] Laser levels have been used in construction for many years. They typically seek to produce a plane of light for a reference for construction projects. Laser levels have been used for large scale construction projects like commercial excavating, laying foundations, and installing drop ceilings. Laser levels save considerable time during initial layout of a construction job compared to other tools such as beam levels, chalk lines, or torpedo levels. Some examples of jobs where laser levels would be useful include laying tile, mounting cabinets, installing counter tops, and building outdoor decks.

[0004] It is an object of the present invention to provide a laser level that is inexpensive and usable by the general public.
